

رسائل الماجستير

1. Using silver and iron oxide nanoparticles to control bacterial wilt pathogen *Ralstonia solanacearum* (2026).
2. Quantifying the expression of some defense genes as molecular markers for resistance to potato brown rot disease (2026).
3. Management of potato black leg disease by organic and mineral compounds (2023).
4. Study the effect of electric and magnetic pulses on the activity of *Erwinia amylovora* bacterium (2022).
5. Virulence of *Ralstonia solanacearum* the causal agent of potato brown rot (2018) .
6. Assessment of real time loop mediated isothermal amplification (LAMP) assay for detection of *Ralstonia solanacearum* (2017).
7. Sensitivity of different detection methods of *Ralstonia solanacearum* in potato tubers and infected sources (2017).
8. Antagonistic effect of some rhizobacteria on the biological activity of *Ralstonia solanacearum* (2015).
9. Use of soil amendments to control bacterial wilt disease in potato (2015).

10. Studies on some microorganisms as biological control agents for potato brown rot (2014).
11. Role of compost microorganisms in controlling potato brown rot disease (2013).
12. Pathological studies on *Ralstonia solanacearum* the causal agent of potato brown rot (2011).
13. Effect of environmental and agricultural factors on epidemiology of potato bacterial wilt disease (2008).
14. Studies on the interaction between potato brown rot bacterium and root exudates in certain crops (2008).
15. Studies on potato brown rot disease under some irrigation systems in Sharkia governorate (2008).
16. Studies on the transmission of Potato brown rot causal organism through weeds in the Egyptian fields (2008).
17. Survival of *Ralstonia solanacearum*, the causal agent of brown rot disease (2006).
18. Studies on brown rot of potato in Egypt (1970).

رسائل الدكتوراه

1. Pathological and molecular studies on *Ralstonia solanacearum* the causative of potato bacterial wilt (2025).
2. Management of bacterial wilt disease of potato using recent different antibacterial agents (2023).
3. Biomangment of potato wilt disease using innovation bio-control formulations. (2022).
4. Economic and environmental assessment of methods for detecting and treating soil and water environment causes the brown rot disease of potato tubers (A comparative study)(2020).
5. Pathological studies on *Ralstonia solanacearum* the causal of bacterial wilt disease of some solanaceous hosts in Egypt (2018).
6. Different strategies to control potato brown rot disease (2016).
7. Pathological studies on potato brown rot under Egyptian conditions (2016).
8. Potato brown rot in relation to different soil characters (2016).

9. Strengthening the efficiency of *Stenotrophomonas maltophilia* in controlling bacterial wilt of potato (2014).
10. Persistence of *Ralstonia solanacearum* (syn. *Pseudomonas solanacearum*) in different habitats in Egypt (2006).
11. Studies on the pathological relationship between potato and brown rot bacteria *Ralstonia (Pseudomonas) solanacearum* (2002).
12. Interaction between some soil microflora and *Pseudomonas solanacearum* (1976).
